

National mirroring and participation in the European (ECISS) and International (ISO) work on standards for:

- Hot-rolled non-alloy structural steel products
- Hot-rolled steel products of weldable fine grain structural steels (normalized/normalized rolled or thermomechanical rolled)
- Hot-rolled flat products made of high yield strength steels for cold forming (normalized/normalized rolled or thermomechanical rolled)
- Structural steels with improved atmospheric corrosion resistance
- Weldable structural steels for fixed offshore structures
- Automatically blast-cleaned and automatically prefabrication primed structural steel products
- Hot-rolled and cold formed piling of non-alloy steels
- Surface condition of hot-rolled steel plates, wide flats and sections

The German standards committee for iron and steel (FES) holds the secretariat ECISS/TC 103, 'Structural steels other than reinforcements'.
